MAREK was awarded the exterior framing and sheathing on the main building of the Lone Star Flight Museum and interior framing of the walls and ceilings. Our team also completed the finish work on both the North and South hangars. The Lone Star Flight Museum has been in Galveston since the 1980s, but due to damage the museum suffered during Hurricane Ike, the decision to relocate further inland to Ellington Field was made. The museum's main building is 137,267 sq ft and stands two stories. The museum now houses exhibit galleries, aviation learning facilities, flight simulators, a 400-seat auditorium, meeting rooms, gift shops, cafés, and a restaurant, along with offices for supporting staff and amenities.
