PROJECT OVERVIEW

Marek Location: Houston

Project Location: Houston

Project Sector: Religious

Services: Metal Framing & Gypsum Assemblies
Ceilings & Acoustical Solutions

Architect: Phillip Johnson and Alan Ritchie Architects

General Contractor: Satterfield & Pontikes

Annunciation Greek Orthodox Cathedral underwent an 11,744 sf expansion due to its expanding congregation and facility needs. The expansion consisted of replacing the middle section of the building, expanding the courtyard and prefabricating the massive dome on the project site.

We were contracted to complete the drywall, sheathing, roof trusses, rough carpentry, thermal insulation, painting, acoustical plaster and acoustical ceilings throughout this expansive project. Our teams worked almost 22,000 hours, installed over 50,000 square feet of drywall (21,000 square feet of ceilings and 30,000 square feet for the walls).
